

CANCER

FACT SHEET

5 most common sites of cancer diagnosed

Cancer is a leading cause of death worldwide:

8,200,000

cancer deaths in 2012.

In 20 years, annual new cancer cases are expected to rise to

22,000,000

Cancer is the uncontrolled division of abnormal cells in the body resulting in malignant tumors.

Cancer can involve any tissue of the body.

Cancer mortality can be reduced if detected and treated early.

Screening

Early diagnosis

More than 30% of cancer deaths could be prevented by modifying or avoiding key risks.

Risk can be decreased by:

increasing fruit and vegetable intake

exercising regularly

protecting yourself against radiation

Chances increase if you:

regularly consume alcohol

are obese or overweight

Use tobacco or inhale secondhand smoke
